Geometry Chapter 1 Review

Multiple Choice
Identify the choice that best completes the statement or answers the question.

1. Name two lines in the figure.
   - a. $A$ and $T$
   - b. $WCR$ and $TRA$
   - c. $\overrightarrow{WC}$ and $\overrightarrow{CR}$
   - d. $\overrightarrow{WC}$ and $\overrightarrow{WT}$

2. Draw and label a pair of opposite rays $\overrightarrow{FG}$ and $\overrightarrow{FH}$.
   - a. 
   - b. 
   - c. 
   - d. 

3. Name a plane that contains $\overrightarrow{AC}$.
   - a. plane $ACR$
   - b. plane $WCT$
   - c. plane $WRT$
   - d. plane $RCA$
**4.** Sketch a figure that shows two coplanar lines that do not intersect, but one of the lines is the intersection of two planes.

a. 

![Diagram of coplanar lines](image)

c. 

![Diagram of intersecting lines](image)

b. 

![Diagram of intersecting lines](image)

d. 

![Diagram of intersecting lines](image)

**5.** Extend the table. What is the maximum number of squares determined by a $7 \times 7$ figure?

<table>
<thead>
<tr>
<th>Figure</th>
<th>$1 \times 1$</th>
<th>$2 \times 2$</th>
<th>$3 \times 3$</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum Number of Squares</td>
<td>1</td>
<td>5</td>
<td>14</td>
</tr>
</tbody>
</table>

a. 140 squares  

b. 125 squares  

c. 82 squares  

d. 110 squares

**6.** Find the length of $BC$.

- $BC = -7$  
- $BC = -9$  
- $BC = 7$  
- $BC = 8$
7. $D$ is between $C$ and $E$. $CE = 6x$, $CD = 4x + 8$, and $DE = 27$. Find $CE$.

$$CE = 17.5$$
$$CE = 78$$
$$CE = 105$$
$$CE = 57$$

8. The map shows a linear section of Highway 35. Today, the Ybarras plan to drive the 360 miles from Springfield to Junction City. They will stop for lunch in Roseburg, which is at the midpoint of the trip. If they have already traveled 55 miles this morning, how much farther must they travel before they stop for lunch?

$$a. 125 \text{ mi}$$
$$b. 145 \text{ mi}$$
$$c. 180 \text{ mi}$$
$$d. 305 \text{ mi}$$

$$a. JK = 1, KL = 1, JL = 2$$
$$b. JK = 6, KL = 6, JL = 12$$
$$c. JK = 12, KL = 12, JL = 6$$
$$d. JK = 18, KL = 18, JL = 36$$

10. The tip of a pendulum at rest sits at point $B$. During an experiment, a physics student sets the pendulum in motion. The tip of the pendulum swings back and forth along part of a circular path from point $A$ to point $C$. During each swing the tip passes through point $B$. Name all the angles in the diagram.

$$a. \angle AOB, \angle BOC$$
$$b. \angle AOB, \angle COB, \angle AOC$$
$$c. \angle AOB, \angle BOA, \angle COB, \angle BOC$$
$$d. \angle OAB, \angle OBC, \angle OCB$$
11. Find the measure of $\angle BOD$. Then, classify the angle as acute, right, or obtuse.

- a. $m\angle BOD = 125^\circ$; obtuse
- b. $m\angle BOD = 35^\circ$; acute
- c. $m\angle BOD = 90^\circ$; right
- d. $m\angle BOD = 160^\circ$; obtuse

12. $m\angle IJK = 57^\circ$ and $m\angle IJL = 20^\circ$. Find $m\angle LJK$.

- a. $m\angle LJK = -37^\circ$
- b. $m\angle LJK = 77^\circ$
- c. $m\angle LJK = 37^\circ$
- d. $m\angle LJK = 40^\circ$

13. $BD$ bisects $\angle ABC$, $m\angle ABD = (7x - 1)^\circ$, and $m\angle DBC = (4x + 8)^\circ$. Find $m\angle ABD$.

- a. $m\angle ABD = 22^\circ$
- b. $m\angle ABD = 3^\circ$
- c. $m\angle ABD = 40^\circ$
- d. $m\angle ABD = 20^\circ$
14. Tell whether \( \angle 1 \) and \( \angle 2 \) are only adjacent, adjacent and form a linear pair, or not adjacent.

\[ \begin{array}{ccc}
\text{a. only adjacent} & \text{b. adjacent and form a linear pair} & \text{c. not adjacent} \\
\end{array} \]

15. Tell whether \( \angle 1 \) and \( \angle 3 \) are only adjacent, adjacent and form a linear pair, or not adjacent.

\[ \begin{array}{ccc}
\text{a. not adjacent} & \text{b. only adjacent} & \text{c. adjacent and form a linear pair} \\
\end{array} \]
16. Tell whether $\angle FAC$ and $\angle 3$ are only adjacent, adjacent and form a linear pair, or not adjacent.

- $\angle FAC$ and $\angle 3$ are only adjacent.
- $\angle FAC$ and $\angle 3$ are adjacent and form a linear pair.
- $\angle FAC$ and $\angle 3$ are not adjacent.

17. Find the measure of the complement of $\angle M$, where $m\angle M = 31.1^\circ$

- $m\angle M = 58.9^\circ$
- $m\angle M = 148.9^\circ$
- $m\angle M = 121.1^\circ$

18. Find the measure of the supplement of $\angle R$, where $m\angle R = (8z + 10)^\circ$

- $m\angle R = (170 - 8z)^\circ$
- $m\angle R = (190 - 8z)^\circ$
- $m\angle R = (80 - 8z)^\circ$

19. An angle measures 2 degrees more than 3 times its complement. Find the measure of its complement.

- $m\angle = 272^\circ$
- $m\angle = 68^\circ$
- $m\angle = 22^\circ$
- $m\angle = 23^\circ$

20. A billiard ball bounces off the sides of a rectangular billiards table in such a way that $\angle 1 \equiv \angle 3$, $\angle 4 \equiv \angle 6$, and $\angle 3$ and $\angle 4$ are complementary. If $m\angle 1 = 26.5^\circ$, find $m\angle 3$, $m\angle 4$, and $m\angle 5$.

- $m\angle 3 = 26.5^\circ$; $m\angle 4 = 63.5^\circ$; $m\angle 5 = 63.5^\circ$
- $m\angle 3 = 26.5^\circ$; $m\angle 4 = 63.5^\circ$; $m\angle 5 = 53^\circ$
- $m\angle 3 = 63.5^\circ$; $m\angle 4 = 26.5^\circ$; $m\angle 5 = 53^\circ$
- $m\angle 3 = 26.5^\circ$; $m\angle 4 = 153.5^\circ$; $m\angle 5 = 26.5^\circ$
21. Name all pairs of vertical angles.

a. $\angle MLN$ and $\angle JLM$; $\angle JLK$ and $\angle KLN$
b. $\angle JLK$ and $\angle MLN$; $\angle JLM$ and $\angle KLN$
c. $\angle KLN$ and $\angle MNL$; $\angle JML$ and $\angle KNL$
d. $\angle JLM$ and $\angle JLN$; $\angle KLN$ and $\angle MLN$

22. Find the perimeter and area of the figure.

a. perimeter $= 6x^2 + 14$; area $= 3x + 24$
b. perimeter $= 7x + 14$; area $= 3x + 24$
c. perimeter $= 7x + 14$; area $= 6x + 48$
d. perimeter $= 7x + 14$; area $= 6x^2 + 14$

23. The rectangles on a quilt are 2 in. wide and 3 in. long. The perimeter of each rectangle is made by a pattern of red thread. If there are 30 rectangles in the quilt, how much red thread will be needed?

a. 10 in. c. 180 in.
b. 150 in. d. 300 in.

24. Find the circumference and area of the circle. Use 3.14 for $\pi$, and round your answer to the nearest tenth.

a. $C = 201.0$ ft; $A = 50.2$ ft$^2$
b. $C = 50.2$ ft; $A = 25.1$ ft$^2$
c. $C = 25.1$ ft; $A = 50.2$ ft$^2$
d. $C = 50.2$ ft; $A = 201.0$ ft$^2$
25. The width of a rectangular mirror is \( \frac{3}{4} \) the measure of the length of the mirror. If the area is 192 in\(^2\), what are the length and width of the mirror?

a. length = 24 in., width = 8 in.  
   b. length = 16 in., width = 12 in.  
   c. length = 48 in., width = 4 in.  
   d. length = 25 in., width = 71 in.

26. Find the coordinates of the midpoint of \( \overline{CM} \) with endpoints \( C(1, -6) \) and \( M(7, 5) \).

a. \((3, -1)\)  
   b. \((8, -1)\)  
   c. \((4, \frac{-1}{2})\)  
   d. \((4\frac{1}{2}, \frac{1}{2})\)

27. \( M \) is the midpoint of \( \overline{AN} \), \( A \) has coordinates \((-6, -6)\), and \( M \) has coordinates \((1, 2)\). Find the coordinates of \( N \).

a. \((8, 10)\)  
   b. \((-5, -4)\)  
   c. \((-2\frac{1}{2}, -2)\)  
   d. \((8\frac{1}{2}, 9\frac{1}{2})\)
28. Find $CD$ and $EF$. Then determine if $CD \cong EF$.

\[ CD = \sqrt{13}, \ EF = \sqrt{13}, \ CD \cong EF \]
\[ CD = \sqrt{5}, \ EF = \sqrt{13}, \ CD \neq EF \]
\[ CD = 3\sqrt{5}, \ EF = 3\sqrt{5}, \ CD \neq EF \]
\[ CD = \sqrt{5}, \ EF = \sqrt{5}, \ CD \cong EF \]

29. Use the Distance Formula and the Pythagorean Theorem to find the distance, to the nearest tenth, from $T(4, -2)$ to $U(-2, 3)$.

a. -1.0 units  
c. 0.0 units
b. 3.4 units  
d. 7.8 units

30. There are four fruit trees in the corners of a square backyard with 30-ft sides. What is the distance between the apple tree $A$ and the plum tree $P$ to the nearest tenth?

a. 42.4 ft  
c. 30.0 ft
b. 42.3 ft  
d. 30.3 ft
31. \( R \) is the midpoint of \( \overline{AB} \). \( T \) is the midpoint of \( \overline{AC} \). \( S \) is the midpoint of \( \overline{BC} \). Use the diagram to find the coordinates of \( T \), the area of \( \triangle RST \), and \( AB \). Round your answers to the nearest tenth.

\[
\text{a. } T(3, 1); \text{ area of } \triangle RST = 8; AB \approx 17.9
\]
\[
\text{b. } T(3, 1); \text{ area of } \triangle RST = 32; AB \approx 17.9
\]
\[
\text{c. } T(3, 1); \text{ area of } \triangle RST = 16; AB \approx 8.9
\]
\[
\text{d. } T(3, 1); \text{ area of } \triangle RST = 8; AB \approx 8.9
\]

32. Identify the transformation. Then use arrow notation to describe the transformation.

\[
\text{a. } \text{The transformation is a 90° rotation. } ABC \rightarrow A'B'C'
\]
\[
\text{b. } \text{The transformation is a 45° rotation. } ABC \rightarrow A'B'C'
\]
\[
\text{c. } \text{The transformation is a reflection. } ABC \rightarrow A'B'C'
\]
\[
\text{d. } \text{The transformation is a translation. } ABC \rightarrow A'B'C'
\]
33. A figure has vertices at \( E(-3, 1), F(1, 1), \) and \( G(4, 5) \). After a transformation, the image of the figure has vertices at \( E'(3, -1), F'(1, -1), \) and \( G'(4, -5) \). Draw the preimage and image. Then identify the transformation.
a. The transformation is a reflection across the x-axis.

b. The transformation is a 180° rotation.

c. The transformation is a 90° rotation.
The transformation is a translation.
34. Find the coordinates for the image of \( \triangle EFG \) after the translation \( (x, y) \rightarrow (x - 6, y + 2) \). Draw the image.
35. An animated film artist creates a simple scene by translating a kite against a still background. Write a rule for the translation of kite 1 to kite 2.

![Diagram showing kites 1 and 2 with coordinates labeled]

\[ \begin{align*}
\text{a. } (x, y) &\rightarrow (x - 6, y + 6) \\
\text{b. } (x, y) &\rightarrow (x + 6, y - 6) \\
\text{c. } (x, y) &\rightarrow (x - 2, y + 2) \\
\text{d. } (x, y) &\rightarrow (x + 2, y - 2)
\end{align*} \]

36. Name three collinear points.

![Diagram showing points P, R, G, and N]

\[ \begin{align*}
\text{a. } P, G, \text{ and } N \\
\text{b. } R, P, \text{ and } N \\
\text{c. } R, P, \text{ and } G \\
\text{d. } R, G, \text{ and } N
\end{align*} \]

Matching

Match each vocabulary term with its definition.

a. line
b. opposite rays
c. postulate
d. ray
e. plane
f. vertex
g. endpoint
h. segment

37. a point at an end of a segment or the starting point of a ray

38. a part of a line that starts at an endpoint and extends forever in one direction
39. a statement that is accepted as true without proof, also called an axiom
40. the common endpoint of the sides of an angle
41. two rays that have a common endpoint and form a line
42. a part of a line consisting of two endpoints and all points between them

**Match each vocabulary term with its definition.**

- a. exterior of an angle
- b. interior of an angle
- c. vertical angles
- d. acute angle
- e. obtuse angle
- f. right angle
- g. straight angle
- h. complementary angles
- i. supplementary angles

43. the nonadjacent angles formed by two intersecting lines
44. an angle formed by two opposite rays that measures 180°
45. an angle that measures greater than 0° and less than 90°
46. an angle that measures 90°
47. the set of all points between the sides of an angle
48. an angle that measures greater than 90° and less than 180°
49. the set of all points outside an angle

**Match each vocabulary term with its definition.**

- a. translation
- b. transformation
- c. rotation
- d. reflection
- e. position
- f. dimension
- g. image
- h. preimage

50. a shape that results from a transformation of a figure
51. the original figure in a transformation
52. a transformation across a line
53. a change in the position, size, or shape of a figure
54. a transformation about a point \( P \), such that each point and its image are the same distance from \( P \)
55. a transformation in which all the points of a figure move the same distance in the same direction
MULTIPLE CHOICE

1. ANS: C
A line is named by any two points on the line.

<table>

5. ANS: A

Extend the table to notice a pattern.

<table>
<thead>
<tr>
<th>Figure</th>
<th>Size of Figure</th>
<th>1 x 1</th>
<th>2 x 2</th>
<th>3 x 3</th>
<th>4 x 4</th>
<th>5 x 5</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum Number of Squares</td>
<td>1</td>
<td>5</td>
<td>14</td>
<td>30</td>
<td>55</td>
<td></td>
</tr>
</tbody>
</table>

Each figure has the same number of squares as the previous one, plus its size squared.
A 1 x 1 figure has 1 square.
A 2 x 2 figure has 1 + 2² = 5 squares.
A 3 x 3 figure has 5 + 3² = 14 squares.
A 4 x 4 figure has 14 + 4² = 30 squares.
A 5 x 5 figure has 30 + 5² = 55 squares.

Continuing the pattern allows you to find the number of squares in a 7 x 7 figure.
A 6 x 6 figure has 55 + 6² = 91 squares.
A 7 x 7 figure has 91 + 7² = 140 squares.

6. ANS: C

\[ BC = |-8 - (-1)| \]
\[ = |-8 + 1| \]
\[ = |-7| \]
\[ = 7 \]
7. ANS: C

\[ CE = CD + DE \]  
\[ 6x = (4x + 8) + 27 \]  
\[ 6x = 4x + 35 \]  
\[ 2x = 35 \]  
\[ \frac{2x}{2} = \frac{35}{2} \]  
\[ x = \frac{35}{2} \text{ or } 17.5 \]  

Segment Addition Postulate

Substitute 6x for CE and 4x + 8 for CD.

Simplify.

Subtract 4x from both sides.

Divide both sides by 2.

Simplify.

\[ CE = 6x = 6(17.5) = 105 \]

Feedback

A You found the value of x. Find the length of the specified segment.

B You found the length of a different segment.

C Correct!

D Check your equation. Make sure you are not subtracting instead of adding.

PTS: 1 DIF: Average REF: Page 15 OBJ: 1-2.3 Using the Segment Addition Postulate NAT: 12.3.5.a STA: (G.3)(B) TOP: 1-2 Measuring and Constructing Segments

8. ANS: A

If the Ybarra’s current position is represented by X, then the distance they must travel before they stop for lunch is XR.

\[ SX + XR = SR \]  
\[ XR = SR - SX \]  
\[ XR = \frac{1}{2} (360) - 55 \]  
\[ XR = 125 \]  

Segment Addition Postulate

Solve for XR.

Substitute known values. R is the midpoint of SJ, so \( SR = \frac{1}{2} SJ \).

Simplify.

Feedback

A Correct!

B Use the definition of midpoint and the Segment Addition Postulate to find the distance to Roseburg.

C This is the distance from Springfield to Roseburg. You must subtract the distance they have already traveled.

D This is the distance to Junction City. Use the definition of midpoint and the Segment Addition Postulate to find the distance to Roseburg.

9. ANS: B

![Diagram](image)

**Step 1** Write an equation and solve.

\[ JK = KL \quad K \text{ is the midpoint of } JL. \]

6x = 3x + 3 \quad \text{Substitute } 6x \text{ for } JK \text{ and } 3x + 3 \text{ for } KL.

3x = 3 \quad \text{Subtract } 3x \text{ from both sides.}

x = 1 \quad \text{Divide both sides by } 3.

**Step 2** Find JK, KL, and JL.

\[ JK = 6x = 6(1) = 6 \]

\[ KL = 3x + 3 = 3(1) + 3 = 6 \]

\[ JL = JK + KL = 6 + 6 = 12 \]

13. ANS: D

**Step 1** Solve for \( x \).

\[
m\angle ABD = m\angle DBC
\]

Definition of angle bisector.

\[
(7x - 1)^\circ = (4x + 8)^\circ
\]

Substitute 7x – 1 for \( \angle ABD \) and 4x + 8 for \( \angle DBC \).

\[
7x = 4x + 9
\]

Add 1 to both sides.

\[
3x = 9
\]

Subtract 4x from both sides.

\[
x = 3
\]

Divide both sides by 3.

**Step 2** Find \( m\angle ABD \).

\[
m\angle ABD = 7x - 1 = 7(3) - 1 = 20^\circ
\]

19. ANS: D
Let $m\angle A = x^\circ$. Then $m\angle B = (90 - x)^\circ$.

\[
m\angle A = 3m\angle B + 2
\]
\[
x = 3(90 - x) + 2 \quad \text{Substitute.}
\]
\[
x = 270 - 3x + 2 \quad \text{Distribute.}
\]
\[
x = 272 - 3x \quad \text{Combine like terms.}
\]
\[
4x = 272 \quad \text{Add 3x to both sides.}
\]
\[
x = \frac{272}{4} \quad \text{Divide both sides by 4.}
\]
\[
x = 68 \quad \text{Simplify.}
\]

The measure of $\angle A$ is $68^\circ$, so its complement is $22^\circ$.

20. ANS: B
Since $\angle 1 \cong \angle 3$, $m\angle 1 \cong m\angle 3$.
Thus $m\angle 3 = 26.5^\circ$.

Since $\angle 3$ and $\angle 4$ are complementary,
$m\angle 4 = 90^\circ - 26.5^\circ = 63.5^\circ$.

Since $\angle 4 \cong \angle 6$, $m\angle 4 \cong m\angle 6$.
Thus $m\angle 6 = 63.5^\circ$.

By the Angle Addition Postulate,
$180^\circ = m\angle 4 + m\angle 5 + m\angle 6$
\[= 63.5^\circ + m\angle 5 + 63.5^\circ\]
Thus, $m\angle 5 = 53^\circ$.

STA: (G.7)(C)  TOP: 1-6 Midpoint and Distance in the Coordinate Plane

27. ANS: A

Step 1 Let the coordinates of N equal (x, y).

Step 2 Use the Midpoint Formula.

\[
(1, 2) = \left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right) = \left(\frac{-6 + x}{2}, \frac{-6 + y}{2}\right)
\]

Step 3 Find the x- and y-coordinates.

\[
\begin{align*}
1 &= \frac{-6 + x}{2} \\
2 &= \frac{-6 + y}{2}
\end{align*}
\]

Set the coordinates equal.

\[
\begin{align*}
2(1) &= 2\left(\frac{-6 + x}{2}\right) \\
2(2) &= 2\left(\frac{-6 + y}{2}\right)
\end{align*}
\]

Multiply both sides by 2.

\[
\begin{align*}
2 &= -6 + x \\
4 &= -6 + y
\end{align*}
\]

Simplify.

\[
\begin{align*}
x &= 8 \\
y &= 10
\end{align*}
\]

Solve for x or y, as appropriate.

The coordinates of N are (8, 10).

Feedback

A  Correct!

B  Let the coordinates of N be (x, y). Substitute known values into the Midpoint Formula to solve for x and y.

C  This is the midpoint of line segment AM. If M is the midpoint of line segment AN, what are the coordinates of N?

D  Let the coordinates of N be (x, y). Substitute known values into the Midpoint Formula to solve for x and y.
